Office Action Summary

Application No.

09/737,734

Applicant(s)

KATAYAMA, YOSHINORI

Examiner

Enrique L. Santiago

Art Unit

2671

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 May 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 and 3-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 7,9,10 and 16-20 is/are allowed.
- 6) ☒ Claim(s) 1, 3-6, 8, 11-15 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-6, 8, 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eick et al. US patent no. 5,596,703 in view of Hayashi US patent no. 5,918,238.

-Regarding claims 1, 11 and 12, Eick et al. teaches an apparatus comprising: an input information processing unit receiving character strings as pieces of input information (see figs. 1 and 3, column 3, lines 33-51, column 4, lines 10-28 and 63-65); comparing the character strings based on a plurality of predetermined comparison criteria (see figs. 3 and 4, column 4, lines 34-41, column 8, lines 1-3, column 15, lines 19-54), and determining a plurality of characteristic elements to be assigned colors (see column 4, lines 34-41, column 5, lines 5-22); assigning colors corresponding to a plurality of preset default values or colors defined by each user to the character strings (see column 10, line 60-column 11, line 17).

Eick et al. does not directly teach an apparatus including an information comparing unit, a color assigning unit assigning colors based on the results of a comparison and a color-assigned information providing unit outputting the information, to which the colors have been assigned, to the outside.

However in similar art Hayashi teaches an apparatus including an information comparing unit 108 (see figs. 1 and 5, column 5, lines 11-13, column 6, lines 8-37), a color assigning unit

Art Unit: 2671

assigning colors based on the results of a comparison (see figs. 1 and 5, column 5, lines 11-16, column 6, lines 8-37) and a color-assigned information providing unit outputting the information, to which colors have been assigned, to the outside (see the abstract, figs. 1 and 3-5, column 9, lines 36-44, column 12, lines 16-32).

Therefore it would have been obvious to one skilled in the art at the time of the invention to use said apparatus, because it would enable the user to distinguish meanings of graphs and tables with added ease (see Hayashi, column 25, lines 20-29).

-Regarding claim 3, Eick et al. does not directly teach an apparatus wherein said information comparing unit defines elements which are common to the pieces of input information as the characteristic elements; and said color assigning unit assigns colors to the elements which are common to the pieces of input information.

However in similar art Hayashi teaches an apparatus wherein said information comparing unit 108 defines elements (cell value) which are common to the pieces of input information as the characteristic elements (see the abstract, column 1, lines 56-65); and said color assigning unit 109 assigns colors to the elements which are common to the pieces of input information (see column 6, lines 8-12, column 7, line 58-column 8, line 12). Therefore it would have been obvious to one skilled in the art at the time of the invention to use said apparatus, because it would enable the user to distinguish meanings of graphs and tables with added ease (see Hayashi, column 25, lines 20-29).

-Regarding claim 4, Eick et al. does not directly teach an apparatus wherein: said information comparing unit defines elements which are not common to the pieces of input

Art Unit: 2671

information as the characteristic elements; and said color assigning unit assigns colors to the elements which are not common to the pieces of input information.

However in similar art Hayashi teaches an apparatus wherein: said information comparing unit defines elements which are not common to the pieces of input information as the characteristic elements (see column 7, lines 47-57, column 16, lines 32-38); and said color assigning unit assigns colors to the elements which are not common to the pieces of input information (see column 2, lines 2-10, column 6, lines 8-12, column 16, lines 34-38). Therefore it would have been obvious to one skilled in the art at the time of the invention to use said apparatus, because it would enable the user to distinguish meanings of graphs and tables with added ease (see Hayashi, column 25, lines 20-29).

-Regarding claim 5, Eick et al. does not directly teach an apparatus wherein: said information comparing unit compares the pieces of input information, in response to given information; and said color assigning unit assigns colors to elements corresponding to the given information, based on the results of comparison.

However in similar art Hayashi teaches an information comparing unit that compares the pieces of input information, in response to given information (see figs. 1 and 5, column 5, lines 11-16, column 6, lines 8-37); and said color assigning unit assigns colors to elements corresponding to the given information, based on the results of comparison (see figs. 1 and 5, column 5, lines 11-16, column 6, lines 8-37). Therefore it would have been obvious to one skilled in the art at the time of the invention to use said apparatus, because it would enable the user to distinguish meanings of graphs and tables with added ease (see Hayashi, column 25, lines 20-29).

Art Unit: 2671

-Regarding claim 6, Eick et al. does not directly teach an apparatus further comprising: a color changing unit changing a color defined by a user to another color in response to data entry by the user.

However in similar art Hayashi teaches said apparatus (see column 9, lines 45-62, column 10, line 60-column 11, line 17). Therefore it would have been obvious to one skilled in the art at the time of the invention to use said apparatus, because it would enable the user to distinguish meanings of graphs and tables with added ease (see Hayashi, column 25, lines 20-29).

-Regarding claim 8, Eick et al. further teaches an apparatus wherein: the pieces of input information are a series of related information (see column 2, lines 34-63, column 7, lines 28-34).

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13, 14 and 15 rejected under 35 U.S.C. 102(b) as being anticipated by Eick et al. US patent no. 5,596,703.

-Regarding claim 13, Eick et al. teaches a method comprising: designating one or more target character strings (see column 4, lines 14-24); comparing an input source for the target character strings (see figs. 3, column 6, lines 55-65, column 14, lines 56-67); assigning a color to each frequency of occurrence of the target character strings in the input source (see column 11, lines 6-17); and displaying the input source with the target character strings noted by the assigned colors (see fig. 3, column 4, lines 10-24).

-Regarding claim 14, Eick et al. further teaches comparing the input source to determine common character strings and specifying the common character strings as the target character strings (see column 1, line 65-column 2, line 8, column 2, lines 34-63, column 5, lines 5-22).

-Regarding claim 15, Eick et al. teaches a method comprising: allowing users to assign colors to one or more target character strings (see column 10, lines 60-65); analyzing an input source for the target character strings (see column 10, line 60-column 11, line 17); and displaying the input source to one of the users with the target character strings noted by the colors assigned by the one of the users (see fig. 3, column 5, lines 5-22).

Allowable Subject Matter

Claims 7, 9, 10 and 16-20 are allowed.

Response to Arguments

The applicant's arguments were addressed in the examiners final rejection and advisory action.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US patent no. 5,787,414

US patent no. 6,137,499

US patent no. 6,301,579 B1

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Enrique L Santiago whose telephone number is 703 306-5908. The examiner can normally be reached on Monday to Friday from 7:00 A.M. to 3:30 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Zimmerman whose telephone number is 703 305-9798, can be reached on Monday to Friday from 7:00 A.M. to 3:30 P.M.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
Washington, D.C. 20231

or faxed to:

703 872-9306 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
